

A versatile POS system for specialty retails; such as shoes, bags, and apparels, is intentionally designed for providing efficiency in sale and marketing information, and dealing with the complexity and variety of stock inventory for multi branches. Handling thousands of SKUs is more convenient with barcode for every process, not only in point of sale but also in inventory management. The system comes up with the web service technology to ensure the completeness of data transmission between branches and headquarters.

The outstanding functions:

- Easy to use product selection for distribution to multi branches.
- Support consignment and from time-to-time sale event in conjunction with 3rd party ERP.
- Provide real time matrix-viewed stock reports at store and other branches.
- Automated backup sale information to external drive (support USB flash drive) for fast system recovery with the continuous sale transaction.
- Real time updated sale monitoring for all branches via web service.
